Professional Summary

Senior full stack software engineer with 8+ years of experience building customer-facing SaaS applications in startup and enterprise environments. Specializes in React, TypeScript, Python, API and data design, and end-to-end product delivery. Experienced in translating complex requirements into maintainable systems and leading work from technical design through implementation, release, and production support.

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, C#, SQL, HTML, CSS
- **Frontend:** React, component libraries, SASS, LESS, Webpack
- **Backend and Data:** Node.js, FastAPI, GraphQL, REST, PostgreSQL, MongoDB, SQLAlchemy
- **Tools and Practices:** Git, GitHub Actions, CI/CD, Docker, Datadog, Terraform, Jira, system design, technical specifications, automated testing, code review
- **AI and Remote Development:** Cursor, Claude and Claude Code, OpenAI Codex, ChatGPT, agent orchestration, Ona, GitHub Codespaces, SSH, tmux

Professional Experience

Vanta

Full Stack Software Engineer | Remote
March 2025 – Present

- Develop customer-facing features for Issue Management, enabling customers to organize and resolve audit findings through tagging, task assignment, lifecycle workflows, comments, and other collaboration capabilities.
- Led the design and delivery of an approvals system for Issue Management, translating product requirements into technical specifications, implementation milestones, and production-ready full-stack functionality.
- Build and maintain application features across React and TypeScript interfaces, GraphQL APIs, and MongoDB data models, with ownership spanning implementation, testing, code review, release, and follow-up improvements.
- Created reusable data-visualization components for real-time compliance dashboards, improving how customers understand security posture and remediation work.
- Strengthened production operations through on-call ownership, new Datadog monitors, and automated alert triage that investigates errors and creates actionable Jira tickets.
- Developed an agent-agnostic task orchestration plugin and remote development workflow for large projects, using scoped context and parallel agents for planning, implementation, and review; increased personal output by approximately 3x while reducing review feedback.

Headway

Full Stack Software Engineer | Remote

July 2022 – September 2024

- Led the design and delivery of structured Treatment Plans and Progress Notes for an electronic health record platform, enabling therapists to track clinical goals and submit required documentation to insurers.
- Built full-stack workflows using React, TypeScript, Python, FastAPI, PostgreSQL, and SQLAlchemy, simplifying complex clinical data entry while satisfying product, insurance, and compliance requirements.
- Owned project delivery across engineering, product, compliance, and design, from technical planning and risk reduction through incremental rollout and production release.

Exactra

Freelance Full Stack Software Engineer | Remote

February 2022 – March 2023

- Built the MVP for Loss Prep AI, a web application that extracted data from uploaded insurance documents and generated risk insights for underwriters.
- Defined the architecture and technology stack, implemented the React and Python application, and established CI/CD workflows to support rapid iteration.

Shift Technology

Full Stack Software Engineer | Paris, France and Remote

October 2018 – July 2022

- Built a configurable insurance claims chatbot framework deployed across multiple enterprise client implementations.
- Developed and maintained claims-management features and a shared React component library supporting multiple products and customer configurations using React, C#, and SQL.
- Refactored the frontend styling system into a reusable LESS theme architecture with layered client overrides, reducing duplication and simplifying customization.

Arrow Electronics

Full Stack Web Development Intern | Centennial, CO

March 2017 – May 2018

- Migrated production components from AngularJS to Angular and maintained backend services built with Spring and JDBC.
- Evaluated and implemented automated SASS documentation generation to improve maintainability of the frontend styling system.

Education

Bachelor of Science in Computer Science

University of Denver | 2018
